

The navigation solution for revision THA.

Intellijoint HIP® is smart navigation that provides orthopaedic surgeons with real-time, intraoperative measurements for cup position, leg length, offset, and hip center of rotation during revision total hip arthroplasty (THA).

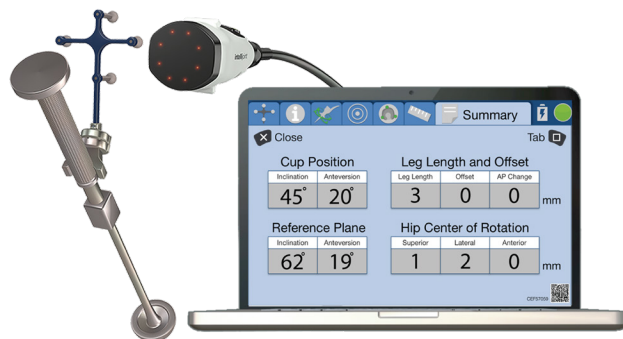

SMART

- System registration and measurements are independent of anatomical landmarks
- Intraoperative measurements can identify primary acetabular cup position and assist in determining whether preservation or replacement is required

VERSATILE & COMPACT

- Open platform allows Intellijoint HIP to be used with any major implant vendor
- Easy-to-use system is comprised of a single tray, laptop, and mini-optical camera

Intellijoint HIP is the only 3D mini-optical navigation system FDA cleared for revision THA.
